# California Postsecondary Education Commission Resolution to Proceed with a 2007 University Eligibility Study

---

Adopted Resolution AR/06-02 September 26, 2006 • [www.cpec.ca.gov](http://www.cpec.ca.gov)

---

Staff recommends that the Commission adopt the following resolution. This will emphasize to the Governor and the Legislature that up-to-date estimates of university eligibility rates are needed and that the Commission, UC, and CSU should proceed with a study.

*The California Postsecondary Education Commission intends to proceed with a University Eligibility Study for the class of 2007. This study will give up-to-date estimates of the percentage of California public high school graduates eligible for the University of California and the California State University. These estimates are needed to assess inequities in access to the state's public university systems and to compare eligibility rates with the figures recommended in California's 1960 Master Plan for Higher Education.*

*The Commission recommends that the Legislature provide the University of California and the California State University with funding at a level that will allow eligibility rates to be estimated with a margin of error comparable to those in the Commission's 2001 and earlier studies.*
